

# The *Future* of Newtown Creek

Government agencies drafted a **Natural Resource Damage Assessment (NRDA) Plan** to seek compensation for **restoring the health of wildlife, plants, and waterways** of Newtown Creek that have been devastated by industrial activities that released oil, toxins, and chemicals.

The plan will **collect money from polluting companies** and be used for restoration projects, which can include:

-  Constructing salt marsh wetlands (More plants!)
-  Creating fish + shellfish + bird habitat (More animals!)
-  Enhancing public access (More parks!)
-  Improving recreational opportunities like fishing & boating (More fun!)

The natural resources on Newtown Creek, like the birds, fishes, plants, and waterways, provide invaluable benefits to both the environment and us humans.

We want to learn about how **you** interact with these natural resources so **we can drive better plans to clean up the Creek, restore more habitat for wildlife, and increase access for humans living and working around the area.** Your thoughts will be submitted to the agencies as a public comment for the draft NRDA plan. The comment period ends on May 30th, 2024.

# More about the *NRDA*

The government agencies working on the NRDA plan are known as the **Trustees**, including:

- National Oceanic and Atmospheric Administration (**NOAA**)
- New York State Department of Environmental Conservation (**NYSDEC**)
- U.S. Fish and Wildlife Service (**USFWS**)

The devastation to the natural resources are referred to as **injury**, which is defined as:

- a decrease in a natural resource's ability to provide services due to contamination. For example, lower nesting success in birds; contaminant concentrations in groundwater exceeding drinking water thresholds.

The money collected by the Trustees from parties potentially responsible such as Exxon and National Grid for the contamination is referred to as **damages**.
